Lightsaber Instructions

1. Use tape to attach the longer LED lead to the positive side of the battery.

2. Adjust the negative lead so that it touches the negative side of the battery.

3. Split the negative lead so that it doesn't touch the battery (LED should turn off)

4. Place the battery into the shorter (handle) straw with the LED popping out.

5. Insert the side of the straw with the battery into the longer straw piece.

    - One technique is by folding down the straw to create a triangle and inserting it into the straw.

6. Use tape to wrap around the handle (short) straw.

7. Press down on the handle where the battery and LED are, and watch your lightsaber light up!

MATERIALS:
- 1 Boba Straw
- Black Tape
- 1 LED
- CR1220 coin cell battery
